Atlas One

NAIC 2026 · INTEGRATION EVIDENCE

Genuine N-ATLaS, on every call.

Atlas One runs Nigeria's N-ATLaS model itself and proves, on every response, that the answer came from it.

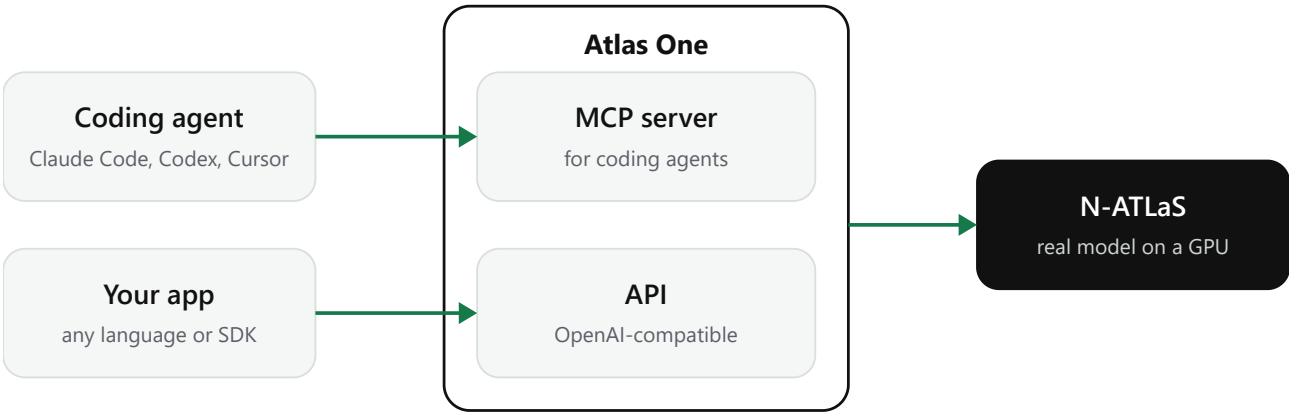

e2944769
pinned model revision, stamped on every response

27.6 tok/s
Hausa generation on the GPU

How it connects

Coding agents and apps reach the same real model through Atlas One. Nothing else answers.

The model

Model	NCAIR1/N-ATLaS · English, Hausa, Igbo, Yoruba
Precision	Full F16, no quantisation
Runtime	llama.cpp on an NVIDIA L4 or A10G GPU

Proof on every response

Each answer carries its own receipt, and whole apps can be verified.

PROOF	WHAT IT SHOWS
`x-atlas-weights`	The exact model and revision that answered
`x-atlas-request-id`	A unique id, traceable in the logs
verified: true	The developer's own app reached N-ATLaS, with a signed receipt

Live results

Real outputs from the live service.

TEST	RESULT	REQUEST ID
Hausa answer	Babban birnin Najeriya Abuja ne. (969 ms)	`req_f48ae97d…`
Four languages	**4 / 4 correct**: English, Hausa, Igbo, Yoruba	`req_b8915c17…`
Structured output	Medicine label to dosing data and Hausa	`req_a6cfb695…`
Function calling	Called track_order, answered in Hausa	`req_b4714f83…`
App verification	**verified: true**	`req_5ac15dec…`

If the model is down

Atlas One says so, with a clear error and a request id. It never substitutes another model.
