Atlas One

NAIC 2026 · REAL-WORLD VALIDATION

Tested by independent developers.

Two developers used Atlas One with their own accounts and coding agents. Every step is in a signed, public log.

2
external developers

2
apps verified on real N-ATLaS

5
improvements shipped from their findings

Who tested

@agapejustix

Codex · Windows

- Built a Hausa support chat and an Igbo quiz app
- **verified: true** on both
- Checked the signed receipt himself
- All four language probes correct

@oluwatobiisaiah

Codex

- Connected and created a project
- Met a GPU queue on our free compute
- Got honest "model starting" errors, never fake output
- Led us to a faster GPU host

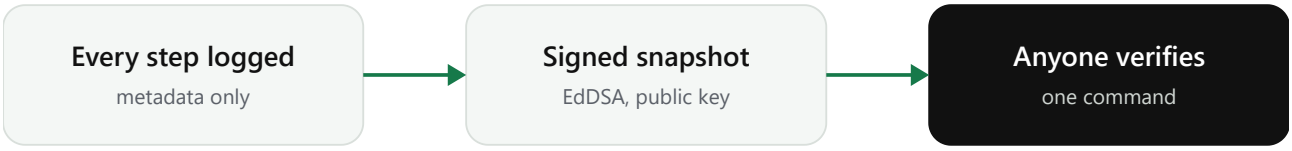

What we learned and changed

Each finding was fixed the same day.

THEY FOUND	WE SHIPPED
Setup took too long	A 3-step guide; the agent opens the key page and prepares the file
Answers missed shop facts	Grounding guidance in every recipe
GPU queue on free compute	Moved to Modal: 24-second start, no queue
Codex sign-in error	Works with every Codex version
Feedback was easy to forget	The agent asks for a rating at a natural pause

How the evidence is kept

Metadata only: never prompts, code or keys.

Integrity check

Signed log	passed 142 events, signature and digest valid
All checks	6 / 6 passed key, signature, digest, count, summary, live log

Appendix: the testers' model calls

Every real inference and app check in their sessions, from the signed log (UTC, 12 October 2026).
