Atlas One

NAIC 2026 · TECHNICAL DOCUMENTATION

How Atlas One works.

An MCP server and an OpenAI-compatible API in front of the real N-ATLaS model.

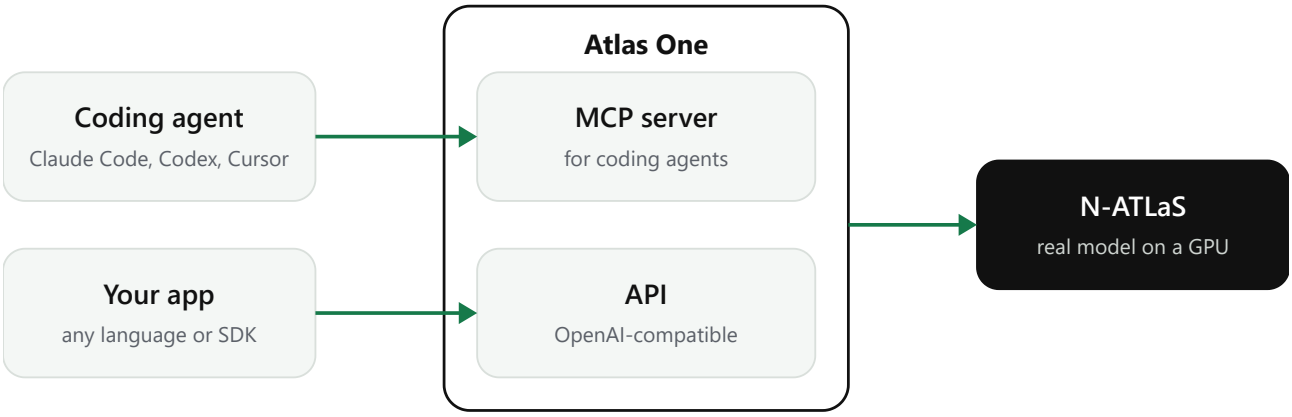

5
tools for any coding agent

1 URL
for every agent and every app

136
automated tests

Architecture

One deployment serves agents, apps and the website.

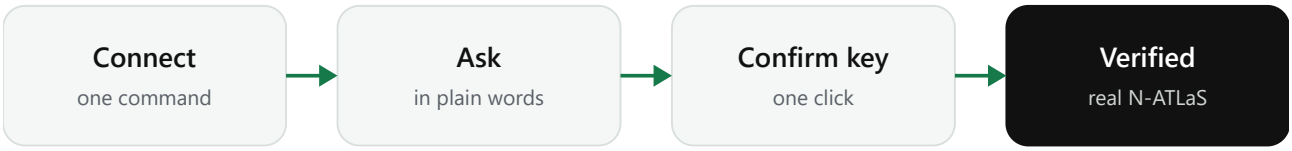

Components

Server	TypeScript on Cloudflare Workers, D1 database
Agent access	Model Context Protocol, OAuth 2.1, GitHub sign-in
Model	llama.cpp serving N-ATLaS F16 on Modal GPUs
Website	React and shadcn/ui

Get started

From connection to a verified app.

With a coding agent

1 Connect once

```
codex mcp add atlas-one --url https://atlas-one.collins-coordinator-worker.workers.dev/mcp
```

2 Ask in plain words

```
Build a translator from English to Hausa using N-ATLaS through
Atlas One. Keep the key server-side, then test and verify it.
```

3 Confirm the key

The key page opens. Confirm, paste the key, and the agent reports verified: true.

With the API

Create a key at atlas-one.collins-coordinator-worker.workers.dev/access, then call it like any OpenAI model.

```
POST https://atlas-one.collins-coordinator-worker.workers.dev/v1/chat/completions
Authorization: Bearer $ATLAS_ONE_API_KEY
{ "model": "n-atlas-8b", "messages": [ ... ] }
```

Security

Keys	Shown once to the owner, stored as hashes, never given to an AI
Access	Agents get only approved permissions; any agent can be signed out
Model	Only the registered N-ATLaS server answers; no other provider
Logs	Metadata only, signed and publicly verifiable

Errors

One error shape, always with a request id.

CODE	MEANING	RETRY
`INVALID_KEY`	Missing, wrong or revoked key	No
`RATE_LIMITED`	Over 30 per minute or 500 per day	Yes
`BACKEND_WARMING`	Model starting, about 30 seconds	Yes
`MODEL_OFFLINE`	Model unreachable; never replaced	Yes

Run your own

Full steps: docs/ARCHITECTURE.md in the repository.

```
git clone https://github.com/agapemiteu/atlasone
npm install && npm run deploy
modal deploy inference/modal_serve.py
```
